Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Carréet et al (US 6,715,892 B1).

Carréet et al discloses a deformable system comprising a part generally in the shape of a rectangular block (Fig. 1, 2), coupled to an actuator enabling the part to be deformed by generating curvature in its long direction, wherein said part presents a main portion (2) to be deformed (column 4, lines 31-35), the main portion carrying projections at its ends such that (5, 6), in longitudinal section, the part presents an elongate U-shape (see 2), and the actuator presents levers (Fig. 2, 11, 12) each presenting at least one bearing point (see center of 11

Art Unit: 2872

and 12) for acting on said projections in order to transmit a force thereto in such a manner as to deform the part (see column 4, lines 31-35), wherein each lever presents at least one bearing point (center of 11) constituted by at least one rigid plane part, said plane part co-operating with at least one ball (joint) for transmitting the force that is to be applied, wherein at least one ball is centered by spring blades distributed around its periphery, at least one lever presents a first bearing point disposed in an outside portion of the part, and a second bearing point spaced apart from the first bearing point towards a free end (Fig. 2b, 11, 12, 13, 14) of said projection and disposed on an inside portion of said projection wherein the first bearing point is adjacent to the face of the main portion of the part that is opposite from said projections (see Fig. 2a), wherein the first and second bearing point comprise two of the rigid plane parts (centers of 11, 12, 13 and 14 are rigid) and rocker (due to spaces in the centers), wherein the part comprises a mirror (beam is focused by 2 thus the element 2 is a mirror broadly interpreted).
